Question 1

Correct

Write a program that prints a simple chessboard.

Input format:

The first line contains the number of inputs T.

The lines after that contain different values for size of the chessboard

Output format:

Print a chessboard of dimensions size * size. Print W for white spaces and B for black spaces.

Input:

2
3
5

Output:

WBW
BWB
WBW
WBWBW
BWBWB
WBWBW
BWBWB
WBWBW

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main(){
3     int T,size;
4     scanf("%d",&T);
5     while(T--){
6
7         scanf("%d",&size);
8         for(int i=0;i<size;i++){
9             for(int j=0;j<size;j++){
10
11                 if((i+j)%2==0){
12                     printf("WW");
13                 }
14                 else{
15                     printf("BB");
16                 }
17             }
18         }
19     }
20 }
```

```
12  
13 ↓  
14     printf( "W" );  
15 }  
16 }  
17     printf( "\n" );  
18  
19 }  
20 }  
21  
22  
23  
24  
25  
26     return 0;  
27 }  
28  
29  
30
```

	Input	Expected	Got	
✓	2	WBW	WBW	✓
	3	BWB	BWB	
	5	WBW WBWBW BWBWB WBWBW BWBWB WBWBW	WBWBW WBWBW BWBWB WBWBW	

Passed all tests! ✓

Question 2

Correct

Let's print a chessboard!

Write a program that takes input:

The first line contains T, the number of test cases

Each test case contains an integer N and also the starting character of the chessboard

Output Format

Print the chessboard as per the given examples

Sample Input / Output

Input:

2
2 W
3 B

Output:

WB
BW
BWB
WBW
BWB

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main(){
3     int T;
4     scanf("%d",&T);
5     while(T--){
6         int N;
7         char startChar;
8         scanf("%d %c",&N,&startChar);
9         char otherChar=(startChar=='W')? 'B' : 'W';
10        for(int i=0;i<N;i++){
11            for(int j=0;j<N;j++){
12                if((i+j)%2==0){
13                    printf("%c",startChar);
```

```
14 }else{
15     printf("%c",otherChar);
16 }
17 }
18 printf("\n");
19 }
20 }
21 return 0;
22 }
23
24
25
26
```

	Input	Expected	Got	
✓	2	WB	WB	✓
	2 W	BW	BW	
	3 B	BWB	BWB	
		WBW	WBW	
		BWB	BWB	

Passed all tests! ✓

Question 3

Correct

Problem Statement:

In a small coding competition, participants are to be grouped into teams of three members, each member represented by a number — 1, 2, and 3.

The rule of the competition states that no member can repeat within the same team.

Write a program to display all possible unique team combinations that can be formed using the members 1, 2, and 3 without repetition.

Sample Output:

1 2 3

1 3 2

2 1 3

2 3 1

3 1 2

3 2 1

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main()
3 {
4     int i,j,k;
5     for(i=1;i<=3;i++){
6         for(j=1;j<=3;j++){
7             for(k=1;k<=3;k++){
8                 if(i!=j&&j!=k&&i!=k){
9                     printf("%d %d %d\n",i,j,k);
10                }
11            }
12        }
13    }
14 }
15 return 0;
16 }
```

	Expected	Got
1	1 2 3	1 2 3
2	1 3 2	1 3 2
3	2 1 3	2 1 3
4	2 3 1	2 3 1
5	3 1 2	3 1 2
6	3 2 1	3 2 1

Passed all tests! 1
