**Question 1**

Correct

The k-digit number N is an Armstrong number if and only if the k-th power of each digit sums to N.

Given a positive integer N, return true if and only if it is an Armstrong number.

Example 1:

Input:

153

Output:

true

Explanation:

153 is a 3-digit number, and  $153 = 1^3 + 5^3 + 3^3$ .

Example 2:

Input:

123

Output:

false

Explanation:

123 is a 3-digit number, and  $123 \neq 1^3 + 2^3 + 3^3 = 36$ .

Example 3:

Input:

1634

Output:

true

Note:

$1 \leq N \leq 10^8$

**Answer:** (penalty regime: 0 %)

```

1 #include<stdio.h>
2 #include<math.h>
3 int main()
4 {
5     int num,temp,remainder,n=0;
6     double result=0.0;
7
8     scanf("%d",&num);
9     temp=num;
10    while(temp!=0){
11        temp/=10;
12        n++;
13    }
14    temp=num;
15    while(temp!=0){
16        remainder=temp%10;
17        result+=pow(remainder,n);
18        temp/=10;
19    }
20    if((int)result==num)
21        printf("true");
22    else
23        printf("false");
24
25    return 0;
26
27 }
```

	Input	Expected	Got	
✓	153	true	true	✓
✓	123	false	false	✓

Passed all tests! ✓

**Question 2**

Correct

Take a number, reverse it and add it to the original number until the obtained number is a palindrome.

**Constraints**

$1 \leq \text{num} \leq 99999999$

**Sample Input 1**

32

**Sample Output 1**

55

**For example:**

Input	Result
32	55
1234	5555

**Answer:** (penalty regime: 0 %)

```

1 #include<stdio.h>
2 int reverse(int num){
3     int rev=0;
4     while(num!=0){
5         rev=rev*10+num%10;
6         num/=10;
7     }
8     return rev;
9 }
10 }
11 int isPalindrome(int num){
12     return num==reverse(num);
13 }
14 }
15 int main(){
16     int num;
17
18     scanf("%d",&num);
19     while(!isPalindrome(num)){
20         num=num+reverse(num);
21     }

```

```
21
22     }
23     printf("%d",num);
24     return 0;
25 }
26
27
28 }
```

	<b>Input</b>	<b>Expected</b>	<b>Got</b>	
✓	32	55	55	✓
✓	1234	5555	5555	✓

Passed all tests! ✓

**Question 3**

Correct

Maya, a student in an arts and crafts class, wants to create a pattern using stars (\*) in a specific format. She plans to use a program to help her construct the pattern.

Write a program that takes an integer as input and constructs the following pattern using nested for loops.

Input: 5

Output:

```
*
```

  

```
* *
```

  

```
* * *
```

  

```
* * * *
```

  

```
* * * * *
```

  

```
* * * *
```

  

```
* *
```

  

```
*
```

**Answer:** (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main()
3 {
4     int n;
5     scanf("%d",&n);
6
7     for(int i=1;i<=n;i++){
8         for(int j=1;j<=i;j++){
9             printf("*");
10            if(j<i)printf(" ");
11        }
12        printf("\n");
13    }
14    for(int i=n-1;i>=1;i--){
15        for(int j=1;j<=i;j++){
16            printf("*");
17            if(j<i)printf(" ");
18        }
19
20        printf("\n");
21    }
22
23    return 0;
24 }
```

	<b>Input</b>	<b>Expected</b>	<b>Got</b>	
✓	5	*	*	✓
		* *	* *	
		* * *	* * *	
		* * * *	* * * *	
		* * * * *	* * * * *	
		* * * *	* * * *	
		* * *	* * *	
		*	*
